DETAILED ACTION

Allowable Subject Matter

Claims 1 and 4-17 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

With respect to claim 1, the pertinent prior art fails to teach a light emitting panel with a first portion having steps and a second portion that widens from the input edge surface, a bisecting plane that is parallel to the front wall and bisects the input edge surface, and the steps facing the input edge surface making an average angle β_{av} with respect to a normal on the bisecting plane, wherein the $5 \leq \beta_{av} \leq 25^\circ$. Claims 4-17 are allowed as being dependent on independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

Applicant's arguments, see Remarks, filed 7/17/2006, with respect to claim 1 have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gotoh et al. (US Patent 7,073,933), Kraft (US Patent 6,908,204), Yano et al. (US Patent 6,585,386), Tai et al. (US Patent 5,671,994) all teach light guides with angled surfaces, but by calculating the angle β_{av} from the surface angle given and an imaginary bisecting line, all

would have an average angle β_{av} outside of the claimed range and Tai et al. and Yano et al. point out that varying the angle to the range given would result in light leakage and deteriorating efficiency.
